Network Change:

BellSouth Telecommunications LLC. d/b/a AT&T Florida is announcing that at Key West wire center (**KYWSFLMA**) in route 2, the expiration of a lease agreement requires the removal of RT site 2213A. Therefore, DLC (SLC5, DISCS) service will be cutover to copper/metallic from the Central Office to nearby SAls. ATM DSL will be cutover to new and existing IPDSLAMs. DS1 service will be cutover to DMXtend mux and to new optical 3192 High Density Repeater Shelf (HDRS). There are ten SAls affected by the cutovers within the affected route.

Description of Type of Changes Planned:

The removal of the RT site will require the cutover of all DLC(SLC5, DISCS) service to straight copper at the existing SAls shown below:

S 1100 13th St	R Lot 3 Stadium
2800 N Roosevelt Blvd	S 1066 Farragut Rd
1314 10th St	R 1103 Dewey Rd
3312 Northside Dr	3131 N Roosevelt Blvd
F 1001 17th St	1400 Kennedy Dr

DSL service will be cutover to six existing IPDSLAM cabinets at the following locations:

R Lot 3 Stadium	S 1066 Farragut Rd
1314 10th St	R 1103 Dewey Rd
3312 Northside Dr	F 1001 17th St

DSL service will also be cutover to two new IPDSLAMs at the following locations:

1400 Kennedy Dr	1203 11th St
-----------------	--------------

Description of Reasonably Foreseeable Impact of the Planned Changes:

Upon implementation of this plan and completion of associated work to cutover Digital Loop Carrier (DLC) to metallic feeder from the Central Office, DLC in the affected area will no longer be available. DLC that is defined as compatible with unbundled loops, e.g., those defined to transport POTS-grade service, will be transferred to the new metallic feeder without consequence. **Competitive carrier circuits of this type are not affected by the cutover to the copper facilities.**

Competitive carriers currently employing unbundled loops on metallic facilities, e.g., Digital Subscriber Line (DSL) or line sharing circuits will continue providing service without consequence. **This will enable the Competitive Local Exchange Carriers to provide new ADSL services from their DSLAM located in their Collocation Arrangement to end users behind these ten SAI's over the homerun copper facilities.**
